

# Colour and Silicone Course

Technovent manufactures its' own brand silicone elastomers, adhesives, colours and MagnaCap magnetic retention systems.

Technovent has a wealth of knowledge including 20 years' of silicone elastomer experience, which has led to the development of many innovative products.

The key to creating a high quality maxillofacial prosthesis is a comprehensive understanding of the materials and techniques used thus enabling optimisation of properties and improved patient satisfaction.

Our Colour Course is a 3 day hands on course introducing participants to the theory and practicality of silicones and colouring, including moulding techniques, intrinsic and extrinsic colouration, and finishing.

The course is fully hands on and is suited to those starting in facial prosthetics.
